

QDV120 DR

Fly-Away Antenna: 1.0M X & Ku.

Mobile Internet and restoration are a key part of today's connected world and it is now accepted that having access to the internet for essential business continuity and social welfare is not a luxury but a necessity.

Holkirk is proud to offer a quick deploy satellite terminal for Internet restoration. Whether it is for a single site or multiple deployments, the QDV120 DR terminal is easy to use with fast, accurate deployment.

Satellite communication has traditionally been an expensive and complicated option, but not anymore... With the QDV120 DR terminal from Milexia we have designed a cost effective, simple to use system that can be deployed by staff at any level of skill.

The system has been designed with pre-configured and tested modules for fast assembly with no-tools. The QDV120 DR terminal is compatible with all IP Modem types and can interface directly with outdoor equipment. It has been used all over the world with various organisations where remote access to an internet connection is required.

Technical Information

Overall Case Width: 135cm
 Overall Case Length: 168cm
 Overall Case Height: 45 cm
 Case Weight: 80Kg

Gain Tx: 43.0 dBi
 Gain Rx: 41.8 dBi
 G/T 11.7GHz: 21.6 dBk

- 1.2M quick deploy antenna system.
- Tool-less assembly
- Pointing assistant (easy, no experience required)
- All equipment supplied for internet connection
- Fast and accurate assembly for pointing
- Single case for complete system
